## PG AND RESEARCH DEPARTMENT OF PHYSICS

## VISION

To establish a substratum for excellence and creation of knowledge by igniting the essence of learning physics and exploring its area of research with novel ideas.

## MISSION

Our mission is two - fold.

- To provide an outstanding and distinctive education to our undergraduate and postgraduate students.
- To expand our research enterprises via centers and institutes to achieve national and international prominence in strategic research areas.

## PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

| PEOs | Statements |

## Course Objectives

- To build the elastic behavior in terms of three moduli of elasticity and working of torsion pendulum.
- To apply the concept of bending of beams and analyze the expression, quantify, and understand nature of materials.
- To study the concept of surface tension and viscosity of fluids and learn about an analogous solution to many engineering problems
- To analyze simple harmonic motions mathematically and understand the concept of resonance and set up experiment to evaluate frequency of vibration.
- To understand the concepts of acoustics and the significance of building construction. Able to apply ultrasonic knowledge in real life.

## Pre-requisites

- Knowledge about the concepts of elasticity and bending moment
- Fundamental knowledge of capillarity, viscosity of various liquids
- Develop the idea of formula, frequency of vibration and factors affecting the architectural acoustics

1. Determination of rigidity modulus without mass using Torsional pendulum.
2. Determination of rigidity modulus with masses using Torsional pendulum.
3. Determination of Young's modulus by uniform bending - load depression graph.
4. Determination of Young's modulus by non-uniform bending - scale \& telescope
5. Determination of Young's modulus by cantilever - load depression graph.
6. Determination of rigidity modulus by static torsion.
7. Determination of surface tension \& interfacial surface tension by drop weight method.
8. Determination of co-efficient of viscosity by Stokes' method - terminal velocity.
9. Determination of viscosity by Poiseullie's flow method.
10. Determination of $g$ using compound pendulum.
11. Sonometer - determination of frequency of tuning fork.
